DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a connector assembly on a support rail, classified in class 439, subclass 532.
 - II. Claims 11-20, drawn to a floating mechanism connector assembly, classified in class 439, subclass 247.
 - III. Claims 21, drawn to a method of connecting a connector, classified in class 29.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of Group I does not require invention of Group II to operate .

3. Inventions I, II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the connector assembly can be use different method of mounting a connecting.

Art Unit: 2833

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I, II is not required for Group III, restriction for examination purposes as indicated is proper.
